

# Material flow monitoring of combustible fuels

## Client:

Steel manufacturer (Germany)

## Product:

Derived fuels

## Conveyed volumes:

no information

## Conveyor mechanism:

Pneumatics

## Installation location:

Pneumatic rising pipe with pressure adapter

## According to the client, the FlowJam-system offers the following advantages:

- Simple and reliable
- Simple commissioning (even by customer)
- Quick detection of material standstill

## Client benefits:

- If a clogging is indicated, it is possible to immediately flush the specific line
- This ensures an even supply of combustible fuel to the blast furnace
