

Model iT100, iT200 Series 4-20 mA vibration transmitter modules

Features

- Slim 17.5mm case
- Reverse wiring protection
- ESD protection
- Front panel BNC for dynamic signal output
- Communicates with other iT Series modules through integrated communication bus

Benefits

- Dynamic signal available for portable data collectors (BNC) or hard wired on-line systems (terminals)
- Units can be daisy chained providing multiple 4-20 mA output from a single sensor

The iT Series vibration transmitter module operates from a 24 Volt DC (nominal) power supply. They accept input directly from IEPE-type sensors. The module then processes the signal and produces an output 4-20 mA loop current proportional to the overall in-band vibration. The input dynamic vibration signal is buffered and presented as an output at the BNC connector and on one set of terminals. The standard 4-20 mA loop output signal is usually wired to a Programmable Logic Controller (PLC) or a Distributed Control System (DCS).

Wiring

Terminal designations	
P1	+24V
	COM
	GND
P2	XDU+
	XDU-
	SHD
P3	DYN OUT
	COM
	SHD
P4	4-20
	COM
	SHD

Positive power input for iT module
Common for power input
Earth ground connection (to ground iT module)
Sensor power/signal input
Sensor common input
Sensor shield wiring termination
Dynamic signal out
Common of dynamic signal out
Shield point termination for dynamic out
4-20 mA loop return signal
Common reference for 4-20 mA return
Shield point termination for loop wiring

Front Panel

BNC connector	Output BNC connection for buffered dynamic signal (for data collector)
Green LED	"On" indicates 24 Volt power applied and Sensor connection OK "Off" indicates no 24 Volt power applied or unit not ready "Flashing" indicates BOV out of OK range (5V to 18V)
Red LED	"Blinking" every 2 seconds, normal operation "ON" error condition, indicates signal clipping or internal circuit failure

Output, 4-20 mA loop current

Full scale, ±2%	see chart on back
Output type	peak (equivalent) or true RMS, true peak or true peak - peak

Frequency response, without filtering, -3dB:

Acceleration	0.3 Hz to 20 kHz
Velocity	1.0 Hz to 10 kHz ⁴
Repeatability	2%
Maximum 4-20mA loop load resistance ¹	2%
Zero (4mA) accuracy	±0.25 mA
Reading accuracy	±2% of full scale
High-pass filtering, 2-pole, pre-set ²	see chart on back
Low-pass filtering, 8-pole, pre-set ²	see chart on back
Temperature offset, maximum	0.1%/°C
Turn-on time	120 seconds

Output, buffered dynamic

Gain, RTI sensor	1.0 ± 2%
Noise RTO, broadband, 1Hz - 10 kHz, RMS	<0.0001 volts
Frequency response: amplitude (±3dB)	<0.3 Hz to >100 kHz
Phase shift (at 1 kHz)	0° ± 1°
Output type	AC- AC/DC coupled

Input

Sensor types	IEPE accelerometers and IEPE PiezoVelocity transducers
Sensor sensitivities accepted:	
Accelerometer	10 mV/g, 100 mV/g, 500 mV/g
PiezoVelocity	10 mV/ips, 100 mV/ips, 500 mV/ips
Sensor powering:	
Open circuit voltage	Vin - 2 ±1 Volts
Constant-current	3.6 mA ±20%
Maximum dynamic signal input, for linear response ³	
	±7 volts peak

Environmental

Power: voltage (Vin)	24 ±4 volts, DC
absolute maximum voltage	32 volts DC
current draw	<130 mA
Operating temperature	-40°C to +85°C
Humidity, non-condensing	< 95%
Altitude limit, operating	3,000 meters

Physical

Mounting	snap fit 35 mm DIN rail
Width	17.5 mm (0.70")
Depth, front of BNC to back of DIN rail	127 mm (4.98")
Height	100 mm (3.90")

Notes: ¹ Determined at powering voltage of 24 Volts

² In "Manual Set" mode the filters are continuously variable. LF: 2 Hz to 1 kHz, HF: 200 Hz to 20 kHz

³ Under all conditions the input vibration should not exceed 50ips

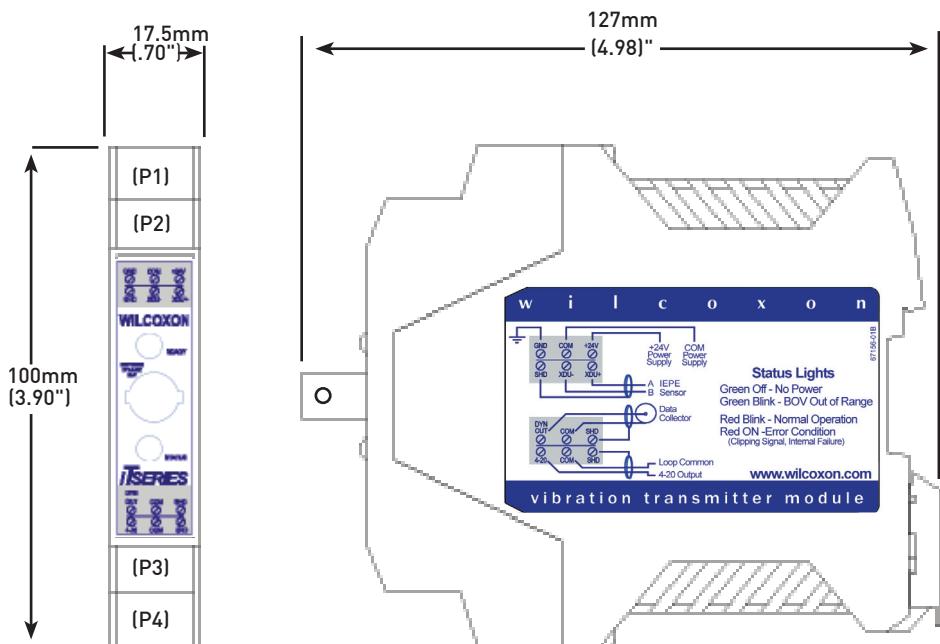

⁴ Limited by sensor type, see ordering information matrix
