VM600 system lifetime

Dear Customer,

Meggitt is committed to providing the best technology and systems for the monitoring and protection of industrial machinery. Our solutions enable safer and more efficient operation of critical machinery in power plants and oil & gas company assets. They allow protection and accurate condition monitoring, helping to avoid catastrophic failures and enabling cost-effective predictive maintenance, in order to help you get the most from your machinery.

Since its launch in 2001, tens of thousands of Vibro-Meter® VM600 rack-based machinery protection and/or condition monitoring systems have been installed throughout the world and VM600 solutions are recognised globally for their high quality, reliability and performance in the field.

With this letter, Meggitt SA would like to confirm its commitment to supporting the VM600 system, a significant product family, for at least the next 10 (ten) years by providing development, customer support, repairs, spare parts or equivalent until at least the year 2030.

While the VM600 system is today in the mature phase of its product life-cycle, it was specifically designed to be flexible and modular, and to support future evolution. Accordingly, this allows us to ensure continued support and extend the VM600 lifetime as required by our customers.

For example, our obsolescence management strategy is applied to all parts of the VM600 system to enable early identification of component obsolescence, thereby allowing appropriate measures to be taken to meet the product lifetime.

In case of additional questions, please do not hesitate to contact your local Meggitt representative.

Yours faithfully,

Michael Hafner
